

## **NEW MERC CAR REMOTE SPY CAMERA DVR FULL HD H.264 30FPS MOTION DETECTION INFRA RED**

Specially selected by Micronic.co.uk making sure the best on the market and only top quality build is supplied. Please do not be fooled by imitations sold at fraction of cost. We're here to do the hard work for you and make sure you are not disappointed.

The Mercedes car key remote is the best available with a high definition camera and top specifications. Built to a high standard when you first pick it up and feel it you know it is good. It is very realistic and is very impressive in appearance and performance. The 5 mega pixel video camera records full HD 1280x720P @30FPS video with H.264 compression saving 30% memory. With the option to change to 1920 x 1080P @30FPS pixel video resolution recording without H.264 compression. Better video footage than ever before from such a small device and it has infra red for night vision (1-3 metre, good for close ups). The use for this type of spy camera is endless, you can carry this on your person and easily point or place where you want it to record. Easily left behind and unnoticed until returned.

Recording audio & video by a simple click of a button and can be left in constant or motion detection. It also features a 12 mega pixel camera for capturing amazing still pictures and a sound audio recorder function.

ALL HIGH DEFINITION CAMERAS NEED A CLASS 6 OR 10 MICRO SD MEMORY CARD WITH A MINIMUM OF 4GB OR IT WON'T WORK. CLASS 4 MEMORY CARDS ARE TOO SLOW AND WILL NOT WORK PROPERLY. MOST OLD MEMORY CARDS FROM PHONES OR OLDER CAMERA'S ARE NOT HD AND USE CLASS 4. BELOW IS A LINK TO OUR FULL RANGE OF CAMERA'S AND WHERE YOU CAN BUY MEMORY CARDS.

PHOTO RESOLUTION - 4032 X 3024

PHOTO CAMERA - 12 MEGA PIXEL

VIDEO CAMERA - 5.0 MEGA PIXEL

VIDEO FRAME RATE - 15-30FPS

BATTERY CAPACITY - 420MA

3 HOURS CHARGING TIME

INFRA RED NIGHT VISION

MOTION DETECTION

With regards to the night vision infra red on this type of camera - IT WILL NOT LIGHT UP A ROOM! Think about the amount of power you need for normal lighting. If that was in the same sized key fob how bright and how long would you expect it to be? Infra red needs more power than normal light so don't expect a miracle. If this could light up a room it would get so hot from the infra red it would get so hot it would melt. You need a minimum of 40 watts of normal light for a camera to film anything decent and only 10 watts with this camera. The bonus here is the low light level camera (0.1 Lux) that is sensitive to invisible infra red light. If you must see in total darkness then use a infra red illuminator in the room that can be plugged into the mains.
