

HIDDEN SPY CAMERA DVR IN PEN 1080P H.264 HDMI VIDEO MOTION
DETECTION 12MP PHOTO'S & SOUND RECORDER
STYLE B

This spy pen camera dvr is top notch quality made of a carbon fibre material and chrome tip ballpoint pen. That's not all this pen hides a 5 mega pixel camera and a 1440x1080 pixel full HD resolution DVR with H.264 video compression and motion detection. No other pen so far has these features and it really stands the test and is as good as advertised. It is very easy to use with a video/motion/photo mode switch to change the operation and a simple one touch button to start it. You can also take really good clear high resolution jpeg images with the 12 mega pixel camera. You can record constant video or set it to motion detect and it will standby until someone or something moves within it's view. This function makes it a real spy product and works a treat! Just install a Class 10 micro SD card with at least 4GB memory and you are ready to film.

Specification and Features
