

NEW SUITCASE TRACKER

A NEW RANGE OF SUITCASE TRACKING.

Remarkable technology put to use in a simple way. Our new suitcase tracking concept allows you to be informed within a few seconds if your case moves. You are able to track it live in 220 countries and the battery can last up to 3 months. There is no problem with keeping the case charged either, simply place it on the supplied charging mat and it charges itself automatically.

Obviously we are aware that these types of cases are placed in the 'hold' on aircraft so have made them easy to travel with. You are able to select your flying time via the 'APP' or from your PC and put the case in flight mode. This immediately stops any attempt by the unit in the case to connect and search for a network during the flight. Your suitcase will then automatically send you a message once it is live and out of flight mode. It will also send you confirmation that the case has also been placed into flight mode.

THE SUITCASE

The case is a Large High Impact Case with Pre Cut Foam Interior. It will keep your valuables safe because it is robust and water resistant. It is supplied with two pieces of pre-cut foam enabling you to customize the inside for your own specific needs.

It is manufactured to have a tough and durable exterior that ensures all your contents are fully protected. Using our Large High Impact Case you can rest assured that your valuable equipment or parts are being transported safely.

TECHNOLOGY INCLUDED:

- Supreme [GPS sensitivity](#)
- Up to 3 months battery life
- Flight mode available
- 5mm depth tough plastic casing surrounding the internal parts
- Enhanced recovery system built into our board (stops the device from lockups)
